

Sisyphus or Sir Edmund?

A Retrospective on Data Sharing

**Homeland
Security**

Science and Technology

Erin Kenneally

**Dept of Homeland Security
Cyber Security Division**

The (non-Oxford) Debate

Q1. Has data sharing improved over the past 3-5 yrs? By what measures?

[Pre: Yes= _____ No= _____ On Fence= _____]

Q2. Will Sir Edmund (improvements)/Sisyphus (deficiencies) advance in the next 1-5 yrs? Why?

[Post: Yes= _____ No= _____ On Fence= _____]

Motivating Questions

- What are the **minimum components** of sustainable data sharing?

- Are there **good models of data sharing** that get some element(s) right?
- Is a **single model** for data sharing desirable? Realistic?
- What should the **public sector** be doing to incentivize data sharing?
- **Is sharing primarily a carrot/stick problem?**
 - How to measure the **ROI** and effectiveness of data sharing?
 - Can data sharing (if done right) = **competitive advantage**?
 - Does data sharing need to be a legal and fiduciary responsibility?

Information Marketplace for Policy and Analysis of Cyber-risk & Trust (IMPACT) Objective

- Coordinate, enhance and develop advanced data and information sharing **tools, datasets, technologies, models, methodologies and infrastructure** to strengthen the capabilities of national and international cyber risk R&D.
- These data sharing components are intended to be **broadly available** as national and international resources
- To **bridge the gap** between producers of cyber-risk-relevant ground truth data, academic and industrial researchers, cyber security technology developers, and decision makers
- In order to **inform policy and analysis** of cyber-risk and trust.

Whatcha Got For Me?

- Internet survey, hitlist, history and census datasets (USC)

- Internet outage datasets (USC)
- IDTK datasets (CAIDA)
- **Packet captures** (Natl Collegiate Defense Competition) (PCH)
- **Malware passive DNS** data daily feed (GaTech)
- Access to Internet Atlas (UW)
- **US Long-haul Infrastructure Topology (UW)**
- Two datasets carved from the DARPA 2009 scalable network monitoring program: attack stream from a target viewpoint and an attack stream from the viewpoint of the attacking botnet (CSU)

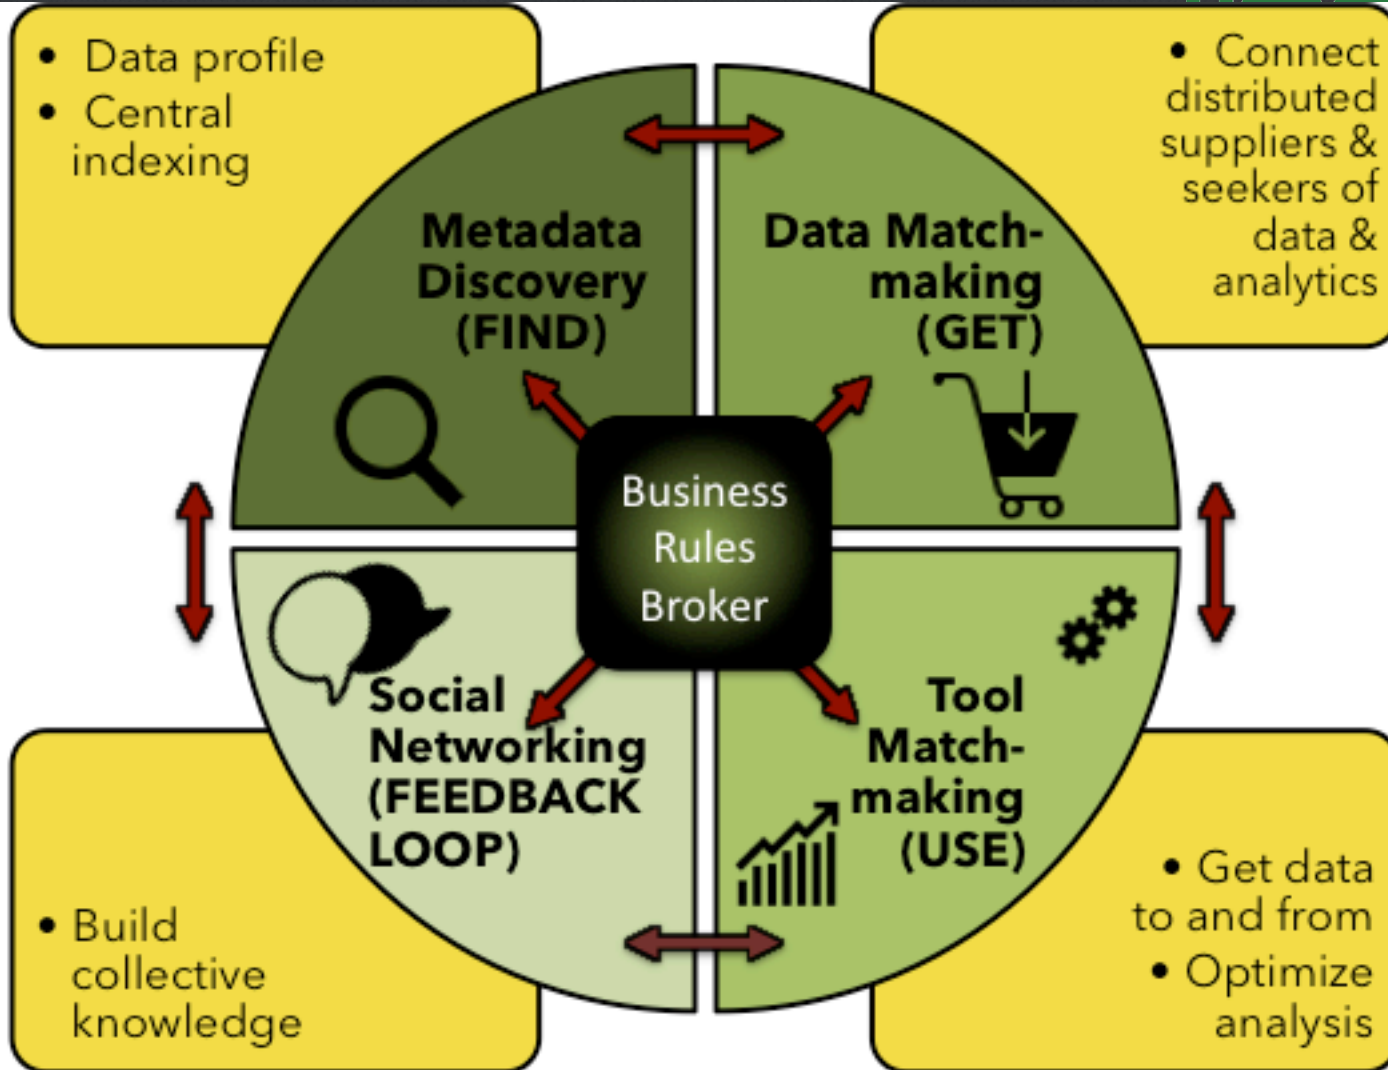

Strategic Vision

-

- Name reflects an evolved implementation of the program's goals:
 - Marketplace - A more open platform to connect and socialize data supply & demand;
 - Policy and Analysis - Research infrastructure driven by and for real world issues; and
 - Cyber-risk & Trust - Beyond just "defense" and "threats, an approach to sharing that views information as a critical infrastructure itself.

Your Turn to Share....

Data Marketplace Survey

[http://www.surveygizmo.com/
s3/1811299/Data-Analytics-
Marketplace](http://www.surveygizmo.com/s3/1811299/Data-Analytics-Marketplace)

15. What research questions or topics motivated your search for data?
(check all that apply) *

Peering relationships

Internet economics

Routing simulation

Network security

Complex networks

System security

Other

Other

7. If you provide data to others, what type of data do you provide? *

Choose all that apply

- Address Space Allocation
- BGP Routing
- Blackhole Address Space
- DNS
- Infrastructure
- IDS and Firewall
- Internet Topology
- IP Packet Headers
- Performance & Quality Measurements
- Traffic Flow
- Sinkhole
- Synthetically Generated
- Unsolicited Bulk Email
- Not Applicable (I don't provide data to others)
- Other

What is lacking with respect to your ability/desire to share data? *

0 stars= not lacking; 5 stars= most lacking

Data exchange standards

Technical infrastructure (support & maintenance)

Administration (dataset curation & management)

Community coordination (e.g., feedback loop between data providers and seekers)

Data governance (standard rules and procedures for sharing data)

Legal assistance (knowledgeable advisement, accessible advisement)

Not Applicable (my ability/desire to share data is not lacking)

19. What are good examples of data sharing efforts that get some element(s) right? (e.g., SIE, Ren-ISAC, APWG, CsirtGadgets.org, SIE, CAIDA, CRAWDAD, Other) *

- SIE
- REN-ISAC
- APWG
- CSIRTGadgets.org
- CAIDA
- CRAWDAD

Other

Other

Other

20. In general, what is lacking with respect to a scalable (widespread, multiparty) ability/desire to share data? *

(check all that apply)

- Data exchange standards
- Data administration capabilities (curation, management)
- Technical infrastructure (support and maintenance)
- Community coordination
- Data governance
- Legal assistance
- Other

- Other

21. Do you think there is a need for a data exchange marketplace where data providers and seekers can go to list and acquire data and analytical tools? *

Strongly
Disagree

Disagree

Agree

Strongly Agree

No Opinion

22. If you agree/strongly agree to the previous question, what are the elements of that marketplace that you believe are needed

0 stars= not needed; 5 stars= definitely needed

Comprehensive, centralized metadata catalog of available datasets

Social networking platform for data Providers, Consumers, and domain knowledge experts (technical, ethical, legal/policy)

Standardized policies and procedures for finding and requesting datasets from federation of Providers

Library of standardized templates and methodology for identifying and evaluating risks, intended utility, and applying disclosure controls on published dataset

Centralized interface for standardized search and communications

Centralized interface for requesting data from federated and/or trusted network of data providers

Centralized interface to matchmaking analysis requests and responses

Tools for analysis

Tools for data management

Feedback loop/reputation indicator for datasets available for exchange

Enter another option

23. Would you be willing to pay (money, data, other resource) for data in an marketplace exchange? *

- No
- Membership fees
- Subscription fees
- Individual dataset fees
- Sponsorship fees
- Data
- Other
